

Microsoft Office 365 Migration

Microsoft Office 365 is a line of collaborative tools that users can access over the web allowing them to collaborate using a combination of desktop software and web apps. Office 365 includes an online version of Exchange—Microsoft’s flagship email platform—called Exchange Online.

A migration to a new email platform is one of the most complex projects your organization will ever undertake, and a move to Exchange Online, or a hybrid environment, is no different. It can potentially expose the organization to spiralling project costs, data loss, compliance breaches, and reduced productivity. It also often necessitates months of co-existence to make the transition as smooth as possible. The transition to the cloud is a major undertaking that requires extensive planning and preparation. Netmail provides a unique, simplified, and more efficient strategy for helping organizations migrate to Exchange Online. We can also help organizations leverage hybrid deployments by keeping some aspects of the environment on-premise while moving other features over to the cloud. Our **SAFE™ (Simple, Accelerated, Fault-Tolerant Exchange Migration)** approach—an archive and inject method that provides a number of options unavailable with single-use migration tools—reduces costs, eliminates complexity, and mitigates risk.

Netmail offers an array of services that can help organizations make the most out of Microsoft Exchange. This is true for all versions of Microsoft Exchange, whether onsite, hosted or in the cloud. Netmail provides:

- Email migration to Office 365
- Archiving from Office 365
- User access to archives
- Advanced eDiscovery and legal hold management
- Extensive migration project experience
