

DEPLOYMENT

Netmail Engineers can easily configure Netmail RPZ Anti-Phishing Services to

- Instantly inspect all domains to assess validity.
- Reject any known Phishing attacks.
- Quarantine any questionable or potential phishing domains for further examination.
- Redirect certain domains (Facebook or Netflix) used by employees that should be working.

Netmail RPZ Anti-Phishing & Domain Defense Service does not require an agent on your servers, devices or endpoints. Netmail will perform domain and URL detection from the Netmail Cloud and manage this extra layer of security for you from our 24x7 Network Operations Center. This allows you to have an instant deployment of the RPZ Anti-Phishing & Domain Defense Service to mitigate against probable phishing attack on your business or organization.

Contact Netmail or your local Netmail Partner today to set up a free trial of this innovative service.

The Global Spamhaus Domain Block List (DBL) currently contains information on close to 300,000 suspicious or outright malicious domains and is updated every two minutes. It is an extraordinarily dynamic block list: tens of thousands of domains are added and removed from the DBL approximately every 24 hours as cybercriminals create and take down domains used in their activities.

Cyber criminals are not going to wait for you to get ready before their next attack...

Neither should your company.
