

## Secure Cloud Archiving for Compliance & eDiscovery

### The Business Case for Cloud Archiving

Organizations today must have a compliant-based archiving system, preferably away from their email and production environment, where it can serve as a legitimate data backup, and adhere to data retention requirements to support legal discovery and compliance. It should also provide users with easy access to historical data.

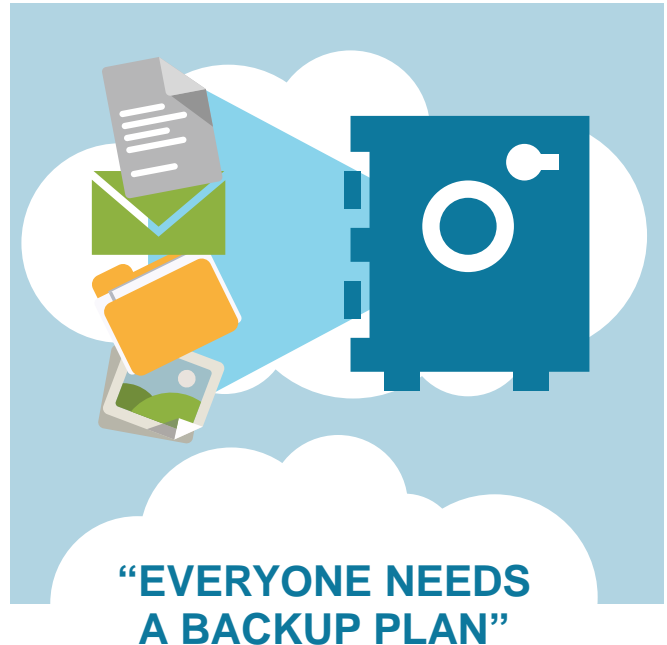

Netmail Cloud Archiving Services provides real-time cloud archiving with unlimited storage and anytime/anywhere access. Ideal for organizations using on-premise Microsoft Exchange, Office 365, or a hybrid model, Netmail Cloud Archiving includes customized reports, dedicated personnel, a 99.9% uptime SLA, and 24x7 monitoring. Current backup systems are expensive, cumbersome, and time-consuming to use. Let Netmail Cloud Archiving Services replace your existing backup system for a fraction of the price.

### Cloud Backup

Netmail Cloud Archiving minimizes the risk of deletion by storing archives outside the production email environment in a dedicated secure archive. It also provides organizations with an immutable copy of their data that can serve as a legitimate backup if needed, and can simplify the process of recovering accidentally or intentionally deleted emails and files in Office 365. With your archives safely located outside the email production environment, you can rest assured that your archives adhere to strict data retention requirements to support legal discovery and regulatory compliance while at the same time ensuring the guaranteed preservation of 100% of your data in the event that you need to recover it.

### Cloud Compliance

Netmail Cloud Archiving Services comprehensively addresses the needs for compliance of regulated industries and can be used to deploy compliance modules that apply to specific vertical markets. Examples of such modules include Information Lifecycle Management, SEC compliance, and WORM-based storage. With Netmail's 100% capture and policy-based retention, there will be no compliance concerns. This comprises full visibility of all email and document metadata with complete user mailbox capture. In addition to complete visibility, our guaranteed data sovereignty availability means you always know where your data is stored.

### Collaborative eDiscovery

Give Legal all the tools they need by providing them with direct access to our eDiscovery tool, Netmail Search. Designed with lawyers in mind, Netmail Search uses a Case Management Dashboard that lets them create, track, manage, and save multiple cases. Case administrators, legal supervisors, lead attorneys, and paralegals can also easily create and manage multiple cases and perform all the initial processing and collection stages without having to involve IT staff. Case managers can then provide restricted access to a specific set of documents to anyone in charge of eDiscovery and investigation.

### Advanced Search Capabilities

Our eDiscovery tool, Netmail Search, includes advanced capabilities designed to allow users to find the right email quickly and easily, without having to employ complex query language technology. Load word lists and build queries with approximate spelling or word proximity. Netmail Search makes it easy to find specific documents using complex or simple searches. Tags and comments help identify messages as useful or inapplicable to your search. To tag selected messages, you can choose an appropriate tag such as Relevant or Flagged, or create a custom tag. Searches can also be duplicated to narrow down your search.

## Easy Cloud Transition

If you're migrating to the cloud, or simply planning a migration in the next few years, Netmail Cloud Archiving Services can help you prepare by consolidating, cleaning, and migrating all of your disparate on-premise data silos (including Active Directory, PSTs, and files) into an open XML repository, and then inject the data into the cloud. Our legacy archive migration solution can also help you easily extract a complete, forensically-defensible data set from numerous legacy sources, including McAfee SaaS Archiving, MXLogic, EMC SourceOne, EMC EmailXtender, Mimosa NearPoint, GWAVA Retain, HP Autonomy, Zantas EAS, and Symantec Enterprise Vault.

## Unlimited Storage

Through its integration with Netmail Store, a low-cost Object-based storage solution, Netmail Archive can easily and economically archive exabytes of email, attachments, files, and other electronic data to the Cloud meet your growing storage requirements at reduced complexity and costs over the long term.

## Key Benefits

**Flexible Delivery Options**– Transitioning to the cloud could not be easier with different options tailored to your business needs. For example, we can drop-ship our collection system to you, which can then be returned to our data center - saving you time and bandwidth. Or simply move your data over a secured connection to one of our data centers.

**Secure Cloud Data Centers** – Netmail's certified and redundant Cloud Data Centers mean reliability and the guaranteed preservation of 100% of your data with a 99.9% SLA. We keep two copies of your data replicated across two data centers, and feature encryption for data at rest and in transit.

**24/7 Monitoring and Real-time Alerting** – Our certified and redundant data centers mean reliability and the preservation of 100% of your data with a 99.9% SLA. With the high availability of our support team, and a quick response time often under 15 minutes, you'll always have the help you need. Additionally, there is no capital cost on hardware, which means no implementation and no physical maintenance required.

**Data Sovereignty and Residency** - Data sovereignty refers to the geographic location of the data. Some organizations, for example, in many European countries, have strict policies that state that data needs to reside in the country of creation. Netmail has data sovereignty in Canada, the US, and Germany.

**Simple Low Pricing** - Is your cloud provider still charging excess fees for incremental computer power, burstable speed, and more storage? At Netmail, we believe in simple pricing with one monthly low price for all infrastructure, application services, and data access.
